

LSD-A – linear outlet adjustable

Technical parameters

Version

Linear outlet with drop deflector.

Construction

The outlets are made of aluminium as standard, the deflector of black (RAL 9005) polypropylene. Burn-in paint in basic RAL shades at extra cost, other colour variants on request. Deflector in white (RAL 9003) on request.

Installation

Linear outlets are designed for ceiling mounting for both supply and exhaust air. Installation height 2,5–3,1 m.

Mounting

using the screws on the front of the outlet or mounting in the plenum box using springs or mounting brackets.

Accessories

Plenum boxes made of galvanized steel, standard or insulated. Set for standard and set for scythe connection stems. Mounting bracket, springs.

Type key for ordering

plenum box

using a hammer, insert to
a depth of 10–15 mm

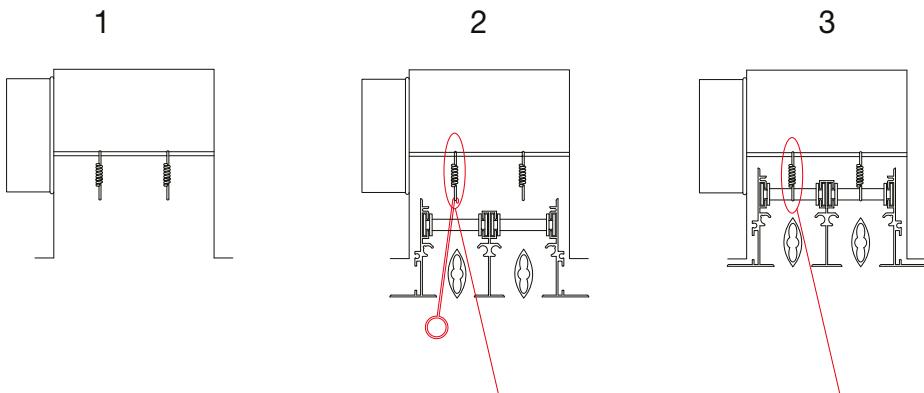

connect both outlets

LSD-A – linear outlet adjustable

Fixing of LSD-A outlets in PBL 1 plenum box with CG hook

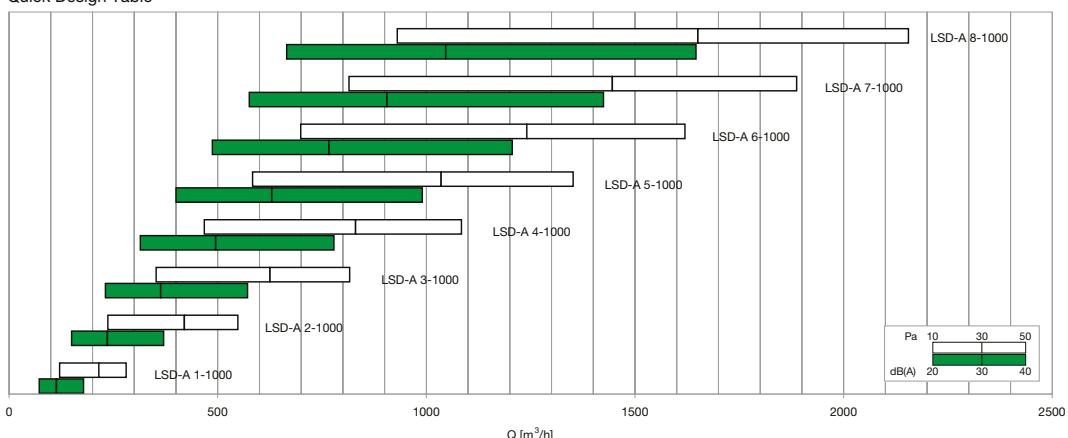

1) Attach the spring with a hook to the metal tube inside the plenum box.

2) Carefully insert the spout into the plenum box and attach the other end of the spring to the extension on the spout.

3) Check that the connection is OK and holding firmly.

Quick Design Table

Parameters for other lengths are obtained by a simple calculation: divide the required flow rate by the length of the outlet in metres and find this calculated value in the table, i.e. for a length of 1500 mm (1.5 m) and a required flow rate of 450 m³/h, find the data for Q = 450/1.5 = 300 m³/h in the table.

Type	A _k [m ²]	Q [m ³ /h]		L _{WA} [dB(A)]		X _(0,25) [m]		Δp, * [Pa]

* without stabilizer and control flap, fully open

Explanatory notes:

Q [m³/h] – air flow

A_k [m²] – free discharge area

Δp, [Pa] – total pressure drop

L_{WA} [dB(A)] – acoustic performance

X_(0,25) [m] – air flow range to obtain a comfortable air speed in the living area under isothermal conditions of 0.25 m/s
