

**COR – control valves****AV 6, A – two-way valve**

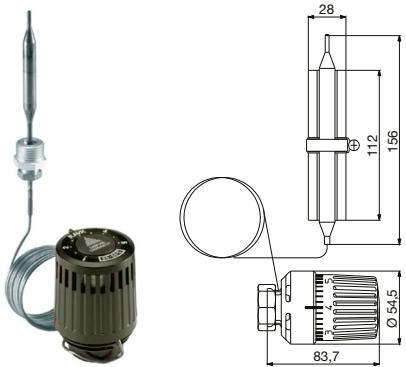

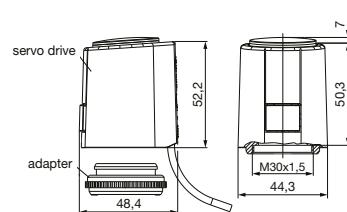

if a two-way valve is used, a short-circuit (bypass) must be considered with a balancing valve, which is taken into account in the calculation of the hydraulics of the entire supply branch of the heating system

**Tri-CTR – three-way valve**

## COR – control valves

### Technical parameters

#### ■ Regulation

Separately suspended COR blinds with water the heater can be regulated using a thermostatic head with a capillary 2 m long. It can be used in combination with a two- or three-way valve. The head includes a fuse

against exceeding the temperature of 30 K above the set value. The range of regulation can be limited or blocked. Threaded connection of the head M 30 x 1.5. The three-way valve is connected to the return line of the heater according to the given

image. The probe of the temperature sensor is placed in the stream of outgoing air. The two-way valve is connected to the heating water supply according to the diagram. The air temperature can be set in the range of 20 to 50 °C, see table.

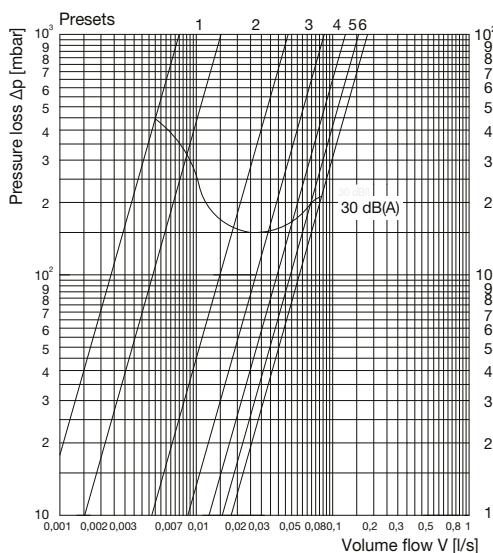

Type	water connection	$t_{\max}$ [°C]	thermostat. header*	temperature control range [°C]	capillary length [m]	thermostatic valve			
						$k_{vs}^{**}$	three way	$k_{vs}^{**}$

\* on request, it is possible to supply a thermostatic head with capillary TR-K2 4070 with a setting range of 40–70 °C

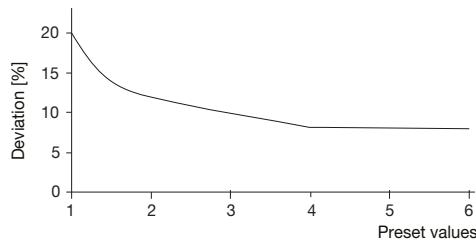

\*\* the  $k_{vs}$  value indicates the flow through the valve in  $\text{m}^3/\text{h}$  at full opening and a pressure drop across the valve of 100 kPa

two-way valve AV6

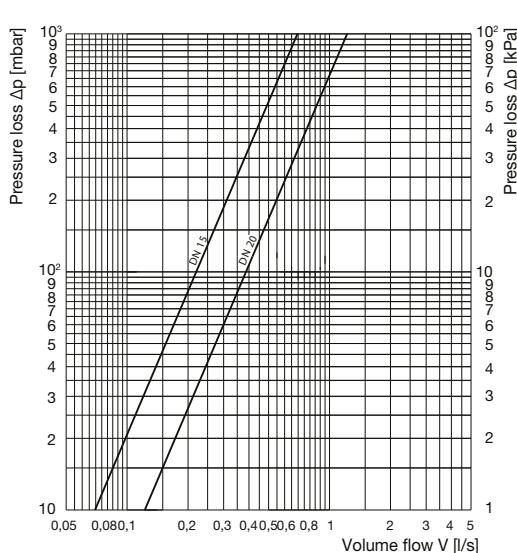

2 K deviation P

Flow tolerance depending on presetting according to DIN EN 215 at 2 K deviation P

three-way valve Tri-CTR

#### Performance data

Presets	1	2	3	4	5	6
$k_v$ value at 1 K deviation P	0.055	0.141	0.221	0.247	0.280	0.320
$k_v$ value at 1.5 K deviation P	0.055	0.170	0.296	0.370	0.420	0.490
$k_v$ value at 2 K deviation P	0.055	0.170	0.313	0.446	0.560	0.650
